Farnborough International Airshow release – UAV

Issue date: 28.05.08

**Aero Sekur at Farnborough International Airshow 2008
Stand D8 - Hall 4**

UAV advancement revealed by Aero Sekur

Aero Sekur, the specialist manufacturer of safety systems and advanced flexible structures for the aerospace and defence markets, will launch a global marketing campaign and promote its wide product range and design competency at Farnborough International Airshow. Exhibiting on stand D8 - Hall 4, the company will confirm its international supply capability which includes parachutes, helicopter flotation systems, ground defence (including NBCR), fuel-tanks, R&D, repair/overhaul and space structures.

Developments to be detailed by Aero Sekur at Farnborough International Airshow include an engineering initiative in the field of UAV recovery. Comprising a combined parachute and airbag shock attenuation system, the solution enables the damage free recovery of UAV's. A key benefit to users is protection of delicate onboard technology, including optronics. The system draws on Aero Sekur's capability in planetary landing and flotation systems: the company reports that it has already proven to be highly effective.

Supporting the company's high profile presence at the airshow, the *Aero Sekur Shooting Stars*, the first all female parachute jump team to appear at Farnborough International Airshow, will perform an impressive synchronised parachute jump to mark the opening of the flying display on each day of the 2008 event.

Footnote: Featured on the Aero Sekur stand will be a SPacecrew Emergency Module (SPEM) display. The exhibit will illustrate Aero Sekur's innovative use of inflatable heat shield technology to develop a new generation rescue system for orbiting astronauts.
