Exhibitor Preview Release
Hall 2B – Stand F90**

Aero Sekur Raises European Profile at Paris

Aero Sekur, the specialist manufacturer of advanced flexible structures is set to raise its European profile at the Paris Airshow, where it will exhibit for the first time.

The company, whose R&D and production facilities are based close to Rome, has a forty year history and is recognised as one of Italy's leading aerospace suppliers. A pan European campaign to raise awareness of the company's pioneering achievements in the field of inflatable structures is supported by a 24 square metre display in Hall 2.

Among the product initiatives to be featured on the Aero Sekur stand is a Non Pyrotechnic Inflation System (NPIS) for flotation bags and life-rafts. Using 'smart' material technology, developed as part of Aero Sekur's space sector programme, the NPIS has been produced as an alternative solution to explosives to actuate valves for aircraft inflation systems. The product is proven in use as part of a flotation bag solution supplied to Agusta Westland for the AW139 Medium Twin-Engine Helicopter.

A specially commissioned model helicopter, designed to highlight the company's competency in a range of aerospace products, will feature as a key element of Aero Sekur's display at Paris. Areas of expertise include life-raft/flotation systems, fuel tanks and parachutes.
