

Aero Sekur sniper suit provides multi-spectral camouflage

Caption: Aero Sekur's work as part of the Italian Future Soldier programme includes developing and manufacturing NBC masks (left) and producing a new sniper suit poncho (fabric shown right).

A new sniper suit poncho has been developed by Aero Sekur as part of the company's work for the Italian Future Soldier programme. Providing effective camouflage in the multi-spectral range, a new fabric used for the suit alters detection capabilities of opto-electronic devices to protect the wearer.

Aero Sekur, an Anglo-Italian company which specialises in the innovative use of flexible materials, reports that the new addition to its portfolio complements its range of safety and camouflage solutions for defence applications.

Designed to prevent detection from night vision glasses during general use, the sniper suit's application extends to providing shelter during extended night missions. A water-repellent feature integral to the fabric ensures that the suit can be worn in any climatic condition.
