

New structure supports Aero Sekur growth

Pictured: Aero Sekur's new divisional heads and Director of Advanced Projects.

Aero Sekur, the specialist in safety systems and advanced flexible structures, has sub-divided its operation into separate business units. Formed in 1993 by the merger of Irvin Aerospace and the Sekur division of Pirelli, the company supplies the global aerospace and defence industries. Development has led to five company divisions and appointment of a Head of Advanced Projects.

Designed to drive the next stage of Aero Sekur's international expansion, the new business units are MRO; Collective Protection Systems; Personal Protection Systems; Airborne Systems and Space. As part of the re-organisation, established staff members have been promoted to head the specialist business units. The move recognises the technical and business skills of the company's middle managers who take responsibility for divisional growth.

Aerospace Engineer Alessandro Perillo is promoted to head Aero Sekur's MRO division. An impressive CV in research, auditing and work as an EASA part 147 instructor puts Perillo in a strong position to develop innovation and global expansion for Repair & Overhaul activities.

With a ten year background at Aero Sekur in senior engineering and project leadership roles, Alice Hromadkova heads Collective Protection Systems. With extensive experience in personnel and resource management, she will use her skills to develop the company's ColPro offer.

Taking responsibility for Personal Protection Systems, Alessandro Pica has worked for Aero Sekur in product development roles for CBRN / ballistic protection. Following success developing a personal product range for the Forza NEC programme, Pica is focusing activity on Aero Sekur becoming the primary high level supplier of personal equipment to the Italian MOD.

Qualified Aerospace Engineer Valentina Bornisacci has specialised in Space industry developments for Aero Sekur and contributed to marketing initiatives over her seven years working for the company. Key achievements include organisation of a biennial AgroSpace conference. Promoted to head the company's Space division, Bornisacci oversees Space exploration developments.

Roberto Simonetti heads Airborne Systems. With a nine year history working for Aero Sekur across R&D and Chief Engineer roles, Simonetti has previous experience of logistics analysis and business development. Achievements at Aero Sekur include development of a Precision Airdrop System: main objectives in his new role encompass business growth and technology advancements.

Aligned to the business unit re-organisation, Marco Adami is promoted to Director of Advanced Projects. Having joined Aero Sekur in 1989, Adami has a wealth of experience across R&D, operations and business development – his skills in management and innovation will be utilised for next generation product initiatives.
